JIHAD MAASARANI

AI Development Specialist | AI Agents, Workflow Automation & Integrations

Beirut, Lebanon | +961 71 919 075 | jihadismasarani@gmail.com | Fully remote, Mon–Fri, 5 PM–1 AM Beirut time

SUMMARY

Hands-on AI builder who designs, ships and documents AI agents, automations and integrations that remove manual work, and that teams actually adopt. Builds daily with Claude Code and ships with n8n, REST APIs, webhooks, Python and JavaScript, adding sandbox testing, logging, approval gates and rollback so live workflows stay reliable. Delivered a Murex tool adopted by ~50 users that cut each budgeting cycle from 8 hours to 10 minutes.

PROFESSIONAL EXPERIENCE

Technology Consultant | EY *Beirut | Feb 2026 – Present*

- Automated rollout workflows across multiple participating entities for a Saudi government client by owning the business logic end to end and building the front-end UI.
- Replaced manual intake by turning loosely defined stakeholder requirements into a working request-management app, and built demand-management workflows for Qatar University.
- Delivered concurrent automation engagements from requirements through testing, documentation and rollout, translating business needs into practical technical solutions.

Full Stack Software Developer Intern | Murex *Beirut | Jun 2025 – Aug 2025*

- Cut each budgeting cycle from ~8 hours to 10 minutes (~98%) for ~50 adopting users by building and deploying ITBF, an automation platform (Angular, C#/.NET 9, PostgreSQL).
- Eliminated manual reconciliation by integrating ServiceNow data into a PostgreSQL pipeline and automating approval, payment and remaining-balance reporting.
- Shipped a secure, repeatable deployment with SAML SSO, HTTPS/TLS, Docker Compose and CI/CD pipelines, backed by unit tests and Git code reviews.

Software Engineer | Lebanese News Aggregator (Independent) *Remote | Jan 2025 – Jun 2025*

- Removed manual curation across 6 sources by building an ingestion pipeline (APIs, RSS, scraping, FastAPI, MongoDB) with Google Gemini summarization and filtering.

AI AGENTS & AUTOMATION PROJECTS

AI Lead Qualification Automation | Claude, n8n, webhooks

- Replaced manual lead triage by building an n8n workflow that receives inbound leads via webhook and uses Claude to classify each as Hot, Warm or Cold with written qualification reasoning.
- Gave sales a prioritized follow-up queue by storing each scored lead together with its AI-generated reasoning, so reps can see why a lead was ranked before they call.

API Integration Agent | Claude Code, LLM agents, REST APIs, sandbox testing

- Removed manual connector-building by designing an AI agent that reads API documentation, extracts endpoints, auth requirements and schemas, and generates working integration code.
- Stopped faulty AI output from shipping by building a generate, sandbox-test, self-correct loop that feeds runtime errors back to the model, with human approval gates before release.
- Made the agent safe against live APIs with rate-limit handling, retries and structured logging that pinpoints where and why a run failed.

Data Quality & Repair Assistant | AI agents, SQL, PostgreSQL

- Turned manual data investigations into an agent workflow that runs SQL checks, diagnoses issues and proposes fixes with plain-English explanations and change previews.
- Kept every AI-proposed change reviewable and reversible through human approval controls, audit logs and transactional rollback.

WhatsApp AI Tutor Bot | n8n

- Automated multi-step conversational learning flows end to end by orchestrating the bot's conversation logic in n8n.

SKILLS

AI: Claude, Claude Code, Google Gemini, prompt engineering, agent design, AI-assisted coding, sandbox testing, human-in-the-loop approval & rollback

Automation & integration: n8n, REST APIs, webhooks, cross-system integration, data pipelines, automated reporting, logging & error handling

Engineering: Python, JavaScript/TypeScript, Node.js, FastAPI, React, SQL, PostgreSQL, MongoDB, Docker, CI/CD, Git, Linux

Ways of working: technical documentation & runbooks, requirements gathering, stakeholder communication, Agile, Jira, remote cross-timezone delivery

CERTIFICATIONS & EDUCATION

B.S. Computer Science, American University of Beirut (2023–2025) | GPA 3.86/4.0, Dean's Honor List, full scholarship

AWS AI Programming with Python Nanodegree | ServiceNow CSA & CAD | Oracle Certified Professional (Java)
